PA - 307.2.2 - Practice Assignment - Create a Wireframe for your Login and Registration Page

Lab Objective:

In this assignment, you will design two forms; one is for the login page, and the other one is for the registration page.
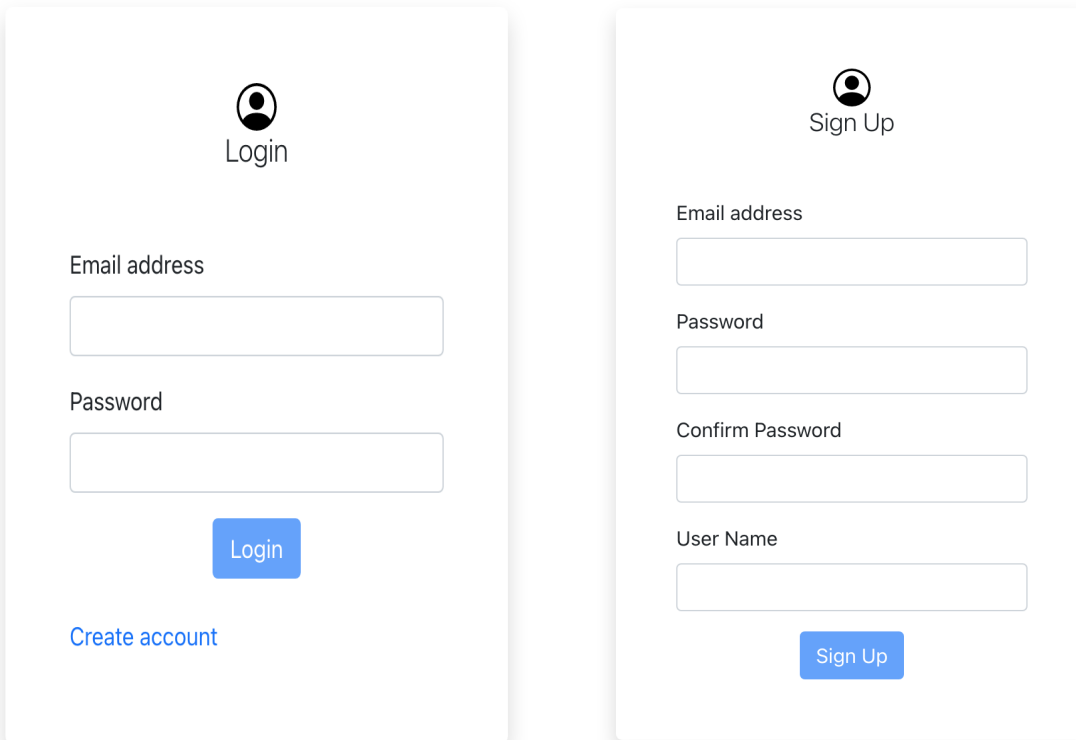

Introduction

A wireframe is a two-dimensional illustration of a page's interface that specifically focuses on space allocation and prioritization of content, functionalities, and intended behaviors. For these reasons, wireframes typically do not include any styling, color, or graphics. Wireframes also help establish relationships between a website's various templates.

Look at different websites for inspiration if necessary. You will create a login page for your capstone project. You can create two pages or one page for a user to register and login.

Easy to use drawing software available to use to create a wireframe includes:
- Google Drawing.
- Paint (Windows).

Examples:

Instructions:

Create a Wireframe for Login page and Registration Page as shown above in the screenshot, and you can add more fields (options) in the form.
